Richard Johnston – **0418 250 860**

On the **12th of September** we will conduct the complete dispersal sale of the '**Kia-Ora**' herd on account of **Game & Beresford**.

A total of **185 head** will sell , comprising of 157 Inmilk & 28 Dry cows. With majority of these cows being Spring calved this sale presents an excellent opportunity for producers to secure young fresh replacements for their herd.

Over the years the Kia-Ora herd has consistently maintained a rolling herd average of 7500 -7800 ltrs in a mainly pastured based system – as with most herds in recent dry times the amount of concentrate feeds feed has been reduced – however the cows present in excellent condition and have the complete confidence of the vendor that they will respond in production when seasonal conditions allow.

AI has been used consistently over the years with a foundation of Blackstar bloodlines creating the foundation of the herd – in recent times sires used include Canbee , Atley , Letton , Justle , Guthrie & Maebull.

With tough seasonal conditions the herd has been extensively culled over the last 12 months and this offering is truly the best of the best – cows present in excellent order, good udders are consistent throughout the group and low SCC right across the herd. Again this presents producers with an excellent opportunity to purchase replacements that are only available at complete herd dispersal such as these.

We look forward to seeing you on the day.
